EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE ABSTRACT:

In the last line of the abstract, delete "(Fig. 21)".

2. Claims 1-16 are allowed.

3. The following is an examiner's statement of reasons for allowance: The prior art does not teach a process for making a microstructure including the step of etching the material substrate from the first conductor layer down to the second insulating layer via a mask pattern in order to form the thin-wall forming region, wherein the substrate is a laminated structure comprises a first conductor layer, a second conductor layer, a third conductor layer and a first insulating layer which is patterned to have a first masking part for covering the thin-wall region of the second conductor layer and a second insulating layer which is patterned to have a second masking part for covering the thin-wall forming of the second conductor layer, wherein the second insulating layer being interposed between the second and the third conductor layer.

4. The closest prior art Lucak et al (US 2002/0158040) discloses a process of forming a MEMS structure, wherein the process including the steps of deep reactive ion etching of silicon substrate (28) through insulating (38) and conductor (36) layer until

reaches an etch stop layer (30) of second insulating layer (see paragraphs 0031-0035 and figure 5).

Lucak et al fail to teach the claimed process step including etching the material from the first conductor layer down to the second insulating layer via a mask pattern including a non-masking region corresponding to the thin-wall forming region of the second conductor layer as the instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Debar et al (6,533,951) disclose a conventional process of making microstructure; Nikkel et al (US 2004/0245588) and Nomoto et al (US 2002/0037601) discloses conventional process for fabricating microstructure.
